7 December 1964

[REDACTED]

Subject: Periodic Report #12 (8/1/64 - 11/30/64), Liaison and Consultation.

This report covers the twenty third (23) through twenty sixth (26) months of contact with your organization. During this report period, four (4) visitations were made to your facility which include ten (10) man-days of liaison and consultation and six (6) man days of maintenance support.

As in the past, most of the contact was with PSD, but starting with the last visitation, closer liaison with members of [REDACTED] staff can be expected in the future.

Programs

Instrumentation - Mechanization

When machine processing of paper prints and enlargements starts following the installation of the RT-24 processor, there will need to be a further extension of the Quality Control Program now in operation. Planning for this new phase by PSD management has continued. Management established Aim Point Standards for the permanence of prints off the RT-24 as comparable to current production. Samples were provided on which residual hypo content were measured. Tests were conducted on roller transport processors comparable to the RT-24 design to determine if the machine will meet the established aim. The test results indicate this level of washing will be achieved on the RT-24 processor.

We reviewed the proposed plan worked out by PSD personnel to measure the exposure and predict the optimum contrast paper to use with each negative. This plan is awaiting adoption on a production basis.

Color - Quality Control

Work was started on a training program for production chemical analysts. No current training program exists which completely satisfies the future needs of PSD.

Processes - Materials

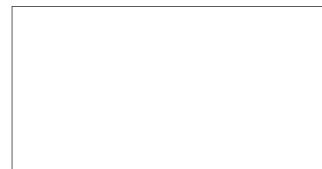

Paper

Many of the acquisition materials as received by PSD have density ranges which exceed the latitude of existing paper. Several

-3-

3. Film Inspection and Splicing Table.
4. New X-Coordinate counter for 10-20-40X Enlarger to accommodate the new Universal Grid.

All of the people whom we contact in your organization continue to give us their fullest cooperation. Needless to say, this is indeed appreciated.
